## EDELSTAHL

## ACIER INOXYDABLE

Edelstahl Rostfrei ist ein Stahl von besonders hoher Reinheit, der aufgrund seines hohen Chromgehalts nicht oxidiert. Rostbildung ist also auch bei einer Beschädigung der Oberfläche ausgeschlossen. Durch die Endbearbeitung der Möbel mit Stahlwerkzeugen (bürsten, schleifen) kann sich in Einzelfällen aber Flugrost bilden. Dieser läßt sich durch Abwischen mit milder Seifenlauge leicht entfernen. Schutz vor zukünftiger Ablagerung von Flugrost und Schmutz sowie vor allgemeinen Witterungseinflüssen bieten verschiedene im Handel erhältliche Edelstahlpolisher. Weitere Pflege ist zum Werterhalt nicht erforderlich.

L’Inox est un acier extrêmement pur qui ne s’oxyde pas du fait de son taux élevé en chrome. La formation de rouille est donc exclue, même en cas d’endommagements. Du fait que les meubles sont parachevés avec des accessoires en acier (brosses, aiguisoirs...), il se peut cependant que dans certains cas, une légère couche de rouille se dépose. Cette fine couche peut aisément être supprimée à l’aide d’une solution savonnée douce. Pour la protection contre d’éventuels dépôts ultérieurs de rouille ou de saleté, et contre les intempéries en général, des différents lustrants sont à votre solution dans les commerces. Aucun autre entretien ne s’impose pour conserver au matériel sa valeur originale.

## GRANIT

## GRANIT

Die Platten sind ab Werk bereits imprägniert. Die Imprägnierung vermindert die Fleckenempfindlichkeit und ist lebensmittelecht, weiter schützt sie den Granit und wirkt wasser-, oel- und schmutzabweisend. Der Unterhalt der Granitplatte wird erleichtert und die Oberfläche bleibt länger schön. Das Sit-Mobilia Imprägnierungs Mittel kann über den Fachhandel bezogen werden - Anwendung 1 x jährlich.

Le granit a subi à l'usine un premier traitement d'imperméabilisation. Ce traitement protégeant contre les taches est adapte aux aliments et ne nuit pas à la santé, est ainsi résistant à l'eau, l'huile et les saletés. L'entretien du plateau devient plus facile et la surface se conserve plus longtemps. Le produit d'imperméabilisation de Sit-Mobilia peut être acheter par le commerce - application une fois par année .

## KERAMIK

## CERAMIQUE

Keramik ist frostbeständig und kommt in allen atmosphärischen und klimatischen Bedingungen zurecht. Das Produkt nimmt praktisch keine Feuchtigkeit auf (Koeffizient nahe 0). Er hat eine abriebfeste und absolut kratzunempfindliche Porzellanoberfläche, MOHS-Härte = 8 (Industriediamant = 10). Seine Eigenschaften bleiben deshalb auch nach intensivem Gebrauch und häufiger Reinigung unverändert. Weiter ist Keramik ein hundertprozentiges Naturprodukt und wird aus den gleichen Rohstoffen wie herkömmliche Fliesen hergestellt. Es belastet die Umwelt nicht und kann sehr einfach recycled werden.

La céramique résiste au gel et s'adapte à toutes sortes de conditions atmosphériques et climatiques, elle n'absorbe pratiquement pas d'humidité (avec un coefficient proche de 0). La céramique est dotée d'une surface en porcelaine résistante à l'absorption et à toute éraflure, avec un dureté MOHS (résistance aux éraflures) de 8 (diamant industriel = 10). Ses propriétés restent donc intactes, même après un usage intensif et un nettoyage fréquent. Notre céramique est un produit à 100% naturel fabriqué à partir des mêmes matières premières que celles utilisées pour la prochaine ordinaire. Elle ne pollue pas l'environnement, elle peut être moulée très facilement et recyclée pour d'autres processus de fabrication.

## HPL

## HPL

Neben Keramik ist die hochwertige HPL-Oberfläche bei der Tischherstellung im Trend. Diese Hochdruck – Schichtstoffoberfläche (HPL = high pressure laminate) hält viel aus. Die Tischplatten sind sehr widerstandsfähig gegen unterschiedlichste Abnutzung. Die Platten sind sehr langlebig und emissionsfrei. Sie bestehen zu rund 70% aus Zellulose und 30% aus der Natur nachempfundenen Harzen. Die Papiere werden in Hochdruckpressen unter Druck von ca. 80 kg/cm² und Wärmeeinwirkung von ca. 140 Grad Celsius verpresst. HPL bedarf wegen seiner widerstandsfähigen und hygienischen, dichten Oberfläche keiner besonderen Pflege.

Comme la céramique, les surfaces en HPL sont très à la mode pour la fabrication de tables. Cette surface stratifiée à haute pression (HPL = High Pressure Laminate) a une bonne résistance. Les plateaux de table résistent bien aux les différentes formes d'usure. Ils sont composés d'environ 70% de cellulose et de 30% de résines inspirées de la nature. Les papiers sont pressés à l'aide de presses haute-pression avec une pression d'environ 80 kg/cm² et un effet de chaleur d'environ 140 degrés Celsius. En raison de sa surface dense, résistante et hygiénique, HPL ne nécessite pas d'entretien particulier.

## DEKTON

## DEKTON

Der besondere Vorgang bildet nun anhand eines neuartigen technologischen Ablaufs in wenigen Stunden das nach, wozu die Natur mehrere Jahrtausende benötigt. Das Resultat ist ein ultrakompaktes Produkt, das lebenslänglich hält. Bei diesem technologischen Herstellungsprozess werden metamorphe Vorgänge von Naturstein beschleunigt ausgeführt. Prozesse wie die Aussetzung an Bedingungen hohen Drucks und hoher Temperaturen hat Mutter Natur während tausenden von Jahren verwendet, um Naturstein zu produzieren.

Dekton utilise la technologie exclusive de sintérisation des particules, un processus hautement technologique qui représente une version accélérée des changements métamorphiques subis par la pierre naturelle, exposée pendant des milliers d'années à des pressions et des températures élevées. La technologie TSP réalise une synthèse totalement innovante de procédés issus des industries technologiques les plus avancées. Une évolution majeure, synonyme de grande avancée technologique et industrielle, capable de générer un processus nouveau, un matériau révolutionnaire et un produit leader.
